# Transformation: construction site to dream home.

The team of Niedermühlbichler Bau experts used stone pitching to remodel the south side of the terrace and property to compensate for the sloping ground. The passive house is built on a combination of reinforced concrete slabs and C 25/30 strip foundations. The internal and external walls are built of brick (25cm) and plastered. The ceilings on the ground floor use variously solid reinforced concrete construction and hollow slabs.

Niedermühlbichler Bau handed this idyllic home over to the client following successful completion of the project.

## Impressions

## Image notes

1

Idyllic mountain home.

The passive house with garage and terrace stands on a spacious, sunny 852m<sup>2</sup> plot surrounded by nature.

2

A solution for every slope.

When a building plot is located on a slope, the ground can be built up and the plot enclosed with reinforced concrete walls.
